

Supply Chain Dynamics (SCD)

Summer term 2026, version: 24/03/2026

Please note: This document reflects our planning before the term started; it will **not** be updated regularly. For short-term changes regarding rooms or times, see Campus. Changes regarding the content will be discussed in class and, if appropriate, communicated via Ilias.

Technicalities

One semester course, taught every second semester in the summer term

Six credit points; on average, four contact hours per week. Taught in English

Course coordinator and teacher: Prof Dr Andreas Größler; additional teacher: Alice Viganò

Part of the MSc study programme in (technically oriented) business administration

Time and location

Classes: Mondays, 15:45–17:15 (M17.73), and Thursdays, 15:45–17:15 (M17.81). For topics and preparation (and exceptions to the standard rooms), see the timetable below.

First class: Thursday, 9 April 2026, 15:45

Recommended requirements

Introductory bachelor-level course in operations management and/or supply chain management

Short description and learning goals

The course starts with discussing the nature of supply chains, particularly their dynamic aspects. Students gain firsthand experience of the effects of dynamic behaviour. A major part of the course is devoted to learning a methodology for better understanding and controlling supply chains: system dynamics. It is used to analyse some real-world cases of dynamic supply chain issues.

After successfully finishing the course, students can:

- name and discuss sources and effects of dynamics in supply chains;
- develop simple supply chain models with system dynamics;
- understand and evaluate complex dynamic supply chain models.

Course design

Although officially split into lectures and tutorial sessions, all classes include both theoretical and practical components. Thus, the content will span the two weekly sessions, including teacher presentations, case study work, modelling exercises, and experiential learning elements. Students are expected to attend all sessions and actively engage in classroom discussions; they should study the required readings before class.

Course element	Quantity	Time required	Total [h]
Contact hours			
Classes	25	2 h	50
Self-study			
Required readings	16	5 h	80
Homework practice sessions	8	1 h	8
			88
Examination			
Assignments	2.5	16 h	40
Total			178

A forum has been opened in Ilias for regular communication between students and teachers, and amongst students.

Examination

The examination for this course will consist of three assessments covering its three major parts (see timetable). The first part will be assessed by a **single-choice questionnaire** (20%). For the second part, students must submit the answer to a **modelling exercise** (40%). The last part will be evaluated by **writing short texts** to answer two to four questions (40%). Details for each test will be provided on Ilias, where the answers must be submitted. The periods in which these answers must be provided are indicated in the timetable below.

Regardless of these submission periods, you need to **register for the examination** on Campus between 12 May 2026 and 02 June 2026. NB: If you want to withdraw from the examination, you must also do so by 02 June 2026.

Timetable

Week		Date	Topic	Teacher	Required reading
15	C1	Thu, 09/04	Introduction to and motivation for the course	AG	McKinsey (2020)
Dynamic phenomena in supply networks					
16	C2	Mon, 13/04	Supply chain management	AG	Kovács & Falagara Sigala (2021)

	C3	Thu, 16/04	Responsible supply chain management	AG	Wu&Pagell (2011)
17	C4	Mon, 20/04	Experience dynamics: The Beer Distribution Game	AG/AV Room: 7.011	
	C5	Thu, 23/04	Beer Distribution Game: debriefing Systemic explanation of game outcomes	AG	Senge (1990), ch. 3
18	C6	Mon, 27/04	Operational causes of supply chain dynamics	AG	Lee et al. (1997)
	C7	Thu, 30/04	Behavioural causes of supply chain dynamics The case for modelling and simulation	AG	Sterman (2000), ch. 1
<i>System dynamics modelling and simulation</i>					
19	C8	Mon, 04/05	An introduction to system dynamics	AG	Sterman (2000), chs. 6&7
	C9	Thu, 07/05	Practice session: identifying stocks and flows, feedback loops	AV	
07/05/2026–14/05/2026: 1 st assessment—single-choice questionnaire about classes C1-C9 (20%)					
20	C10	Mon, 11/05	Minimal structures to explain dynamic behaviour modes	AG	Sterman (2000), chs. 4&8
21	C11	Mon, 18/05	Practice session: getting to know Vensim – Explore an existing model*	AV	Kirkwood (2005)
	C12	Thu, 21/05	Practice session: copying a model*	tbd	
23	C13	Mon, 01/06	Practice session: adding structure*	AV	
24	C14	Mon, 08/06	Practice session: correcting and improving a model*	AV	
	C15	Thu, 11/06	Practice session: modelling a “canned” verbal description*	AV	
25	C16	Mon, 15/06	Practice session: modelling a fuzzy problem*	AV	

	C17	Thu, 18/06	Practice session: modelling a personally chosen problem*	AV	
18/06/2026–06/07/2026: 2 nd assignment—modelling exercise (50%)					
<i>Advanced topics in simulation modelling and applications</i>					
26	C18	Mon, 22/06	Ageing chain models and business cycles – case studies	AG	Sterman (2000), ch. 17
	C19	Thu, 25/06	A comprehensive supply chain model	AG	Sterman (2000), ch. 18
27	C20	Mon, 29/06	Validity of system dynamics models and implementation issues	AV	Barlas (1996)
	C21	Thu, 02/07	En-ROADS workshop: a current application of system dynamics in sustainability	AG	Kapmeier et al. (2021)
28	C22	Mon, 06/07	The mathematics of system dynamics	AG	Gandolfo (2009), chs. 11&12
	C23	Thu, 09/07	Archetypal dynamic behaviour and modelling modules	AG	Senge (1990), app. 2
29	C24	Mon, 13/07	<i>Guest lecture: tbd</i>		
	C25	Thu, 16/07	Summary: Modelling and simulation as research methods; Q&A	AG	Saltelli et al. (2020)
13/07/2026–27/07/2026: 3 rd assignment—writing short texts (30%)					

* For practice sessions: if available, bring your laptop/tablet with Vensim installed (see below)
